Fabricio Rodriguez

Senior Mobile Engineer (iOS & Android)

San José, Costa Rica (Remote, UTC-6) | +506 8988 9252 | rodriguezomarf@gmail.com | linkedin.com/in/fabricio-rodriguez | fabriciorod.github.io

PROFESSIONAL SUMMARY

Senior Mobile Engineer with 13+ years building native iOS and Android apps for US health, fintech, media, and consumer brands. Works fluently in both stacks (Swift/SwiftUI and Kotlin/Jetpack Compose) and has driven feature parity on dual-platform redesigns and modernizations. ISTQB-certified with SDET experience, bringing test automation, CI/CD, and release discipline to every team.

TECHNICAL SKILLS

- **iOS:** Swift, Objective-C, SwiftUI, UIKit, Combine, async/await, Core Data, Xcode, tvOS, watchOS, App Store Connect, TestFlight
- **Android:** Kotlin, Java, Coroutines, Flow, Jetpack Compose, Hilt/Dagger, Room, Android SDK, Android Studio, Gradle, Material Design, Google Play Console
- **Architecture:** MVVM, MVVM-C, Clean Architecture, cross-platform feature parity, reusable UI components, shared SDKs and libraries, offline storage (Realm)
- **Networking & Data:** REST APIs, GraphQL, WebSockets, Retrofit, OkHttp, Alamofire, URLSession, Firebase, SSL pinning
- **Testing & Quality:** ISTQB CTFL, unit, UI, integration and snapshot testing, XCTest, Quick/Nimble, JUnit, Espresso, TDD, test automation, Gherkin, manual and exploratory testing
- **CI/CD & Delivery:** Bitrise, Jenkins, Firebase, App Center, LaunchDarkly feature flags, A/B testing, analytics, certificates and provisioning
- **Ways of Working:** Scrum, Kanban, Jira, Xray, code review, technical interviewing, on-call support

SELECTED PROJECTS

Weight Watchers — iOS & Android Engineer

Full redesign of a global health and wellness app used by millions.

- Delivered the redesigned UI in SwiftUI on iOS and Jetpack Compose on Android, building reusable components for both platforms.
- Partnered with design and product to keep both platforms consistent; user retention rose 6% after the relaunch.

Hot 97 — iOS & Android Engineer

Modernization of the app for New York's #1 hip-hop radio station into a music-focused social platform.

- Brought legacy iOS (Swift) and Android (Kotlin) codebases up to current standards and drove feature parity across both platforms.
- Shipped in-app social video upload and sharing, and built a web admin tool to moderate user-generated video.
- Owned end-to-end testing of real-time social features and media playback, combining exploratory testing with targeted unit and UI test suites.

Greenlight — iOS Engineer

Family banking app serving 6M+ parents and kids.

- Delivered credit card features, from in-app application to card fulfillment, as one of many feature teams working in a shared codebase.
- Built shared SDK frameworks and libraries with MVVM-C, deep linking, and SSL pinning; provided on-call support.

PROFESSIONAL EXPERIENCE

Senior Mobile Engineer | Gorilla Logic | San José, Costa Rica (Remote) **Mar 2017 – Sep 2026**

Nearshore software consultancy; embedded in US client product teams, including Fortune 500 companies.

- Shipped iOS, tvOS, and watchOS features across multiple Scrum teams, from estimation and feature design through testing and release.

- Conducted technical interviews for iOS and Android candidates to keep the hiring bar high.
- Advised product designers on platform guidelines (Apple HIG and Material Design), UI patterns, and technology trends.

Procore (construction management, 160+ countries) — Senior iOS Engineer

- Led a three-phase migration of in-app chat off a third-party provider (UI layer, then data sources, then the socket connection), keeping chat stable at every step.
- Added AI-powered features to chat and managed rollout with LaunchDarkly feature flags; wrote unit, integration, and snapshot tests.

One Medical (an Amazon company) — Senior iOS Engineer

- Built new features at scale in a multi-team primary care app, covering each change with unit and UI tests.
- Raised code quality through code reviews and extensive testing; monitored performance and stability.

Inspirato — Software Development Engineer in Test (iOS)

- Built an XCTest automation suite from scratch to replace a legacy manual regression test plan.
- Defined test cases in Gherkin, managed test plans in Xcode, Jira, and Xray, and ran suites in Bitrise CI workflows.
- Reported automation metrics to stakeholders to show coverage gains and engineering ROI.

DaVita — Senior iOS Engineer

- Built UI components and reusable libraries for a nurse-facing clinical app in a regulated US healthcare setting, using RxSwift and Realm.
- Worked directly with nurses to keep workflows safe and easy to use; resolved escalated production issues and provided on-call support.

Gaia — Senior iOS / tvOS Engineer

- Designed an MVVM architecture that shared ViewModels between iOS and tvOS, removing duplicate code and speeding delivery.
- Integrated Universal Search and the Apple TV app for an HLS video streaming service; worked on in-app purchases and A/B testing.
- Wrote the team's coding and unit-testing conventions and helped set up its first Scrum working agreements.

Android & iOS Developer | RFH Software | San José, Costa Rica **Jun 2013 – Dec 2016**

- Built custom native Android (Java) and iOS (Swift) apps for business clients, mostly on Firebase.
- Ran releases in Google Play Console (alpha and beta tracks) and App Store Connect, plus in-house distribution and testing.

EDUCATION & CERTIFICATIONS

- ISTQB Certified Tester Foundation Level (CTFL), 2023
- Bachelor's in Business Informatics, University of Costa Rica, 2015
